

Belawan Strait Service (BSS)

OOCL aims to provide the best possible levels of customer care and service. The new Belawan Strait Service (BSS) is developed from Indonesia Malaysia Service (IMS). The BSS will cater for the growing demand between Indonesia and Malaysia, and will provide customers with fast, direct and reliable services.

The new service also has an important role in providing a feeder network that links OOCL's South East Asia hub ports of Singapore to Indonesia and Malaysia. This allows customers to access OOCL's line-haul service connecting other parts of Asia, as well as North America and Europe.
