

IQAX eBL

The image features a network diagram with various icons representing different entities in a supply chain or trade network, including a bank, a person, a warehouse, a ship, a document, and a hand holding a device. The background is a blurred image of a person's hands typing on a laptop keyboard.

IQAX

An eBL is an electronic bill of lading, which replaces the OBL paper version. The IQAX eBL platform supports eBL management for the issuance, transfer and surrendering for delivery instantly.

eBL offers several advantages including reduced costs, information accuracy, data security, paperless transactions, etc.

For more information and registration, visit our **site**.

ONE-CLICK TRANSFER

Fast delivery of documents with instant online transfer between eBL parties.

INCREASED VISIBILITY

All bill of lading stakeholders have access to track cargo movement as well as B/L transfer history.

BLOCKCHAIN SECURITY

eBL provides access to a single source of truth with document authenticity and security.

COST SAVINGS

As eBL is entirely online, it removes courier costs; and reduces the risk of D&D charges accruing due to delayed documents.

We take it personally
